

EDUCATION

Software Engineer	Bordeaux INP - Enseirb Matmeca	2024 - 2027
B.Sc. Computer Science	Université de Bordeaux	2022 - 2024
Information Technology Expert	Epitech - European Institute of Technology	2020 - 2022

WORK EXPERIENCE

Web Freelance

2023 | Present

Technologies HTML5, CSS3, JavaScript, VueJS, Nuxt, Shopify

Founded my freelance business in 2023 and delivered my first websites the same year. Nearly 10 projects delivered with a 100% satisfaction rate. Fully hand-crafted design and development from mockup to final product.

Integrated numerous tools into my projects: automated contact form with MailJS, appointment scheduling with Cal.com, FAQ & Conversational Agents. Projects delivered with a clean, modular and easily maintainable codebase. Ongoing client support and on-demand modifications after site delivery.

Full Stack SWE Internship @ LORMAUTO SAS

5 months | 2021

Technologies JavaScript, MQTT Protocol, Node-RED, Docker, Gibson IDE

Internship Report [github.com/TLacault/dev_internship](#) ↗

Built an interactive car dashboard using JavaScript, JSON and the MQTT protocol. Enhanced the initial single-page dashboard by adding 4 new screens, including diagnostics information, a multimedia center with music player, a GPS and an air-conditioning controller with weather view.

Improved the sensor alert and car data visualization application by increasing the number of widgets from ~20 to ~50, using Markdown and a proprietary web development environment, enabling better breakdown prediction.

Optimized and automated car sensor data simulation by creating a dashboard using Node-RED running in a Docker container. Enhanced developer experience by allowing them to simulate sensor activities with a single click among 50 available sensor options, enabling faster implementation and testing of new widgets for the car dashboard.

TECHNOLOGIES & SKILLS

Programming	C, C++, Python, Java, Assembly, OCaml, JavaScript / TypeScript
Web	HTML, CSS + Sass, JavaScript, VueJS + Nuxt, API RESTful + Swagger, SQL, Postgres + Prisma ORM
Tools	SSH, Git, GitHub, GitLab, Docker, Copilot + MCP servers, Git Actions, Vercel, Azure
Environment	Linux (Arch, Debian), VSCode, JetBrains Suite, Emacs, NeoVim
Languages	French C2 (native), English C1 (IELTS), Japanese B1

OPENSOURCE

Mobiliteirb [github.com/TLacault/mobiliteirb](#) ↗ [Youtube Live Demo](#) ↗

2026

Backend	Node.js, Express, PostgreSQL DB + Prisma ORM
API	RESTful, Swagger, Google Locations / Routes / Geocoding, ADEME (carbon factor)
Frontend	Vue.js + Nuxt, Globe.gl (visualization)
Deployment	Docker, CI/CD Pipeline, GitHub Actions, VPN, Portainer, Keycloak
Auth	OpenID + JWT, Typescript

Mobiliteirb is a modern and intuitive web application designed for ENSEIRB-MATMECA students to track and calculate the carbon footprint of their mobility travels, promoting environmental awareness and sustainable transport choices.

Leadership experience, managed a team of 5 developers, weekly meeting with client. Used GitHub Project for task assignment and time management, converted backlog features into GitHub issues.
